VET TEC

Veteran Employment Through Technology Education Courses

A new five-year pilot program which offers a limited number of eligible Veterans the opportunity to get accelerated training in high-tech skills employers want.

Veterans will acquire their high-tech skills through non-degree training programs which generally takes less than a year to complete, helping them to move quickly into in-demand jobs.

VA will strategically select Training Providers that offer Veterans the highest quality training and have a track record of successfully connecting graduates to job opportunities in their field of study.

VA will both pay for the Veteran's tuition, as well as offer Veterans a living stipend while they are in training. Furthermore, participating in the pilot program will not count against a Veteran's GI Bill® Benefits.

While all eligible Veterans are welcome to apply for participation in the pilot, they must meet entry requirements and be accepted into a training program.
